- 1.50 = £21,750 50% deposit = £10,875 then balance

Above 1.5ct please enquire for a firm quote.

Some points to think about when considering 'Memorial' and 'Celebration' Diamonds......

Currently, there are only 4 “MD' lab's in the world. We are the only UK based British company, 'others' are Russian, US and Swiss.

'Others' may offer a price based on a 'range' of say 0.5-0.59? So are you paying for 0.5 or 0.59?. We charge for exactly what is delivered based on our cutting tolerance of +/-5 points over or under what is ordered with the price adjusted accordingly when the balance is due, you pay for exactly what is delivered.

We make Canary comparable with 'LifeGems'– which is light yellow. Not Cognac – which is orangey brown. We make Blue/White like the Swiss. These are natural colours NOT irradiated to alter the shade. We also make White diamonds which are slightly blue as hair and ashes are not a pure based carbon – the colour stems from your donated material.

We also make Pink diamonds – BUT – they are very very difficult to make, consequently cost a lot more. Pink diamonds in nature are much rarer and much more expensive than common white cherry-picked diamonds mined in the earth.

Production takes time, it cannot be done in a few days. Also, we cannot make diamonds from DNA or a strand of hair – it is absolutely impossible (so beware of those who say they can).

90% of the worlds diamonds are cut round with 58 facets called 'Brilliant' – for a good reason, a scientific design to make the diamonds scintillate (sparkle).

Buy the biggest diamond from your budget. Our diamonds are REAL and will last forever.
